## Description

It is the distant future. The world known as Virga is a fullerene balloon three thousand kilometers in diameter, filled with air, water, and aimlessly floating chunks of rock. The humans who live in this vast environment must build their own fusion suns and "towns" that are in the shape of enormous wood and rope wheels that are spun for gravity.

Young, fit, bitter, and friendless, Hayden Griffin is a very dangerous man. He's come to the city of Rush in the nation of Slipstream with one thing in mind: to take murderous revenge for the deaths of his parents six years ago. His target is Admiral Chaison Fanning, head of the fleet of Slipstream, which conquered Hayden's nation of Aerie years ago. And the fact that Hayden's spent his adolescence living with pirates doesn't bode well for Fanning's chances.

## Insightful reviews

Ian: Oh man, this was a head trip.

Imagine a hollow planet, filled with nothing but air. No gravity, only floating bubbles of water and drifting landmasses. Everyone lives in wooden towns that spin for gravity, huddled around artificial suns with on-off switches. It's easy to say it's steampunk, but that cheapens it. This is something very different.

It's a really awesome and weird setting, and it will confuse the hell out of you for the first hundred pages. Heck, just the very alien nature of the setting, with the way the wind works, confused me to the end.

Now, inside this crazy taco is fairly simple story of a young rogue. There's pirate treasure, bandits, battles, and cities. It's clunky and awkward at times, but if it was any more complex, you'd completely be lost, what with the odd setting and all.

In short, awesome weird book that takes classic wood airships and makes them battle in space. Sold.

Matt: To be completely honest, it was the cover art that really attracted me to this series. I have not read any other of Karl Schroeder's novels in the past, so I wasn't sure to expect. The cover art is misleading though, it shows what looks like cool metal spaceships but in this world only flying wooden ships exist. Beside that minor issue, Mr. Schroeder is able to successfully blend Sci-Fi and Fantasy together in a high adventure that will be sure to please fans of both genres.

The one item you hear most this novel is the world building. I am not sure if that is a good or bad thing. Likely it will depend on your taste. To me the world is secondary to the characters and the plot. Don't get me wrong, I love cool new types of environment but it should stay in the background. Virga is essentially a three thousand kilometer balloon that floats in space but is filled with air, water, ice and chunks of rock. There is no gravity inside Virga so spinning rope wheels are used to create centrifugal gravity. The towns are built of wood and would easily fit in

---

a Western novel setting. Most of the larger cities have their own fusion suns to provide heat. Unfortunately, the smaller towns do not and are dependent upon the larger cities for their heat, light, etc.

The novel follows the adventures of Hayden Griffen who is from a smaller town known as Aerie. Aerie attempted to build their fusion sun so that they could separate themselves from a larger nation known as Slipstream. Slipstream found out about the plan and sends an armada to destroy the almost completed sun. During the attack Hayden's parents are brutally killed. Now Hayden has sworn revenge on the individual who led the raid, Admiral Caison Fanning.

Later on, Hayden Griffen falls in with the resistance that are fighting against Slipstream. He becomes a covert agent for the resistance and through luck is taken on a top secret mission led by Admiral Caison Fanning to save Slipstream from an even bigger foe. The majority of the story involves Caison's band of ships seeking the treasure of a long dead pirate. He is hoping to find one item that will save his city from becoming a smoldering ruin. This leaves Hayden Griffen with a problem, does he kill Admiral Caison and let Slipstream become dust or does he become a hero?

If you take out the Sci-Fi elements then the story could easily fit within the pirate swashbuckling universe of the 1700's which I suppose is what Mr. Schroeder was aiming at.

What I liked: The novel was just plain fun to read. If you like swashbuckling, pirates, wooden ships of the line going toe to toe then this is a novel for you. The world building is also really inventive and different; just don't think about it too much.

What I didn't like: But, kinda like the Pirates of Caribbean movies, this was great fun when reading but after about a week the novel left no real impression on me. Also, the entire set up of the story rang a bit false. Hayden's entire back story was built around his thirst for revenge and when his opportunity arises, and there are numerous, Hayden questions it and continually decides against going through with it.

Last word: Karl Schroeder has created a truly unique novel and setting that will please fans across the spectrum but your mileage will vary depending on what type of story you enjoy.

Paul Weimer: Imagine a balloon circling a distant star.

Imagine this balloon is thousands of miles in diameter.

Imagine that within this balloon there are societies clustered around fusion-powered miniature suns, all floating in the atmosphere within this balloon. Societies, polities, nations existing in low gravity who sail the skies on ships and bicycles of a mostly steampunk level of technology. A world of action, adventure, and swashbuckling goodness.

Welcome to Virga!

Sun of Suns introduces this audacious and awesome setting created by its author, Karl

---

Schroeder (who I previously enjoyed his *Lady of Mazes*). Virga is sui generis as a setting, and Schroeder has carefully constructed his world to tell the kind of stories he wants. (There are good reasons why technology, aside from the fusion suns, technology is low, reasons that are revealed in the novel).

Clearly influenced by Dumas-like fiction, *Sun of Suns* is the first in a series of novels set in Virga. *Sun of Suns* tells the story of Hayden Griffin. His family was killed in an attempt to free his nation of Aerie from dominance by the nation of Slipstream, and he has sworn revenge and to continue his parents work to free Aerie. Events cause him, however, to join to an attempt by a small fleet from Slipstream to follow a map that may lead to a treasure beyond price that will give a decisive advantage over its own deadly rivals. Rivals that are no friends of Aerie, either...

Ships and bicycles that sail the skies. Nations and pirates. Sword duels and pistols. I am reminded of a lower tech milieu of the Disney movie *Treasure Planet*, except everything is contained within this balloon. We get hints of what the universe is like of this clearly artificial world, and are introduced to a character exiled from that outside world into Virga.

From Hayden Griffin's desire for revenge, to Admiral Fanning's quest for a decisive edge for Slipstream, to his wife, Venera Fanning, who has an obsession with a bullet wound from years ago, to the mysterious armorer from beyond Virga, Aubri McMullan, not only is the novel a rollicking adventure with flying ships, it also has larger-than-life characters appropriate to the setting.

My only complaint, perhaps is that *Sun of Suns* is a bit too short. Still, that only means that I will \*definitely\* be reading more of the three additional novels Schroeder has written in this amazing world.

If you are the type of fantasy and SF reader who enjoys Dumas-style action and adventure in addition to your SF fix, hoist sail and get thee a copy of *Sun of Suns*. You won't regret it.

M.A. Kropp: many years ago, Tor made a few of their again catalog to be had for obtain as .pdf files. I do not remember what percentage I received prior to they stopped, however it was once a superb list. the matter has continuously been that i actually do not like studying at the computer, in order that they have sat in a folder. I received a Kindle for Christmas this prior year, so i've got ultimately obtained round to interpreting a few of these. solar of Suns is this kind of downloads. it's also the 1st publication i have learn that may be classed as steampunk. The atmosphere is an international that exists within a fullerene sphere. international locations in the sphere are made of towns composed of structural wheels that spin to supply gravity. gentle and heat is equipped by means of man made suns. international locations that experience their very own suns have extra energy and influence, and people who do not are depending on those that do. Airships and fan-powered "bikes" are common. i discovered the idea that to be a bit challenging to envision, even though you don't want to have an ideal clutch of the constitution to appreciate the story. many of the tale is worried with the political goings-on between numerous of the worlds contained in the sphere. Characters will not be deeply built and, in a few cases, side on stereotypical. the most protagonist is the younger guy out to revenge the loss of life of his mom and dad in an assault on his state which was once attempting to build a sun. the most

---

tale is a quest undertaken through a bunch from one state to discover a "weapon" that might supply them the virtue within the present war. one of many enemies has equipped a tremendous warship and they're searching for how to defeat it. (Yes, i am being vague, yet i do not are looking to provide to a lot away.) the tale itself was once attention-grabbing adequate to maintain me reading, regardless of the shortcoming of intensity within the characters. The expertise remains real to the steampunk idea- there are not any hyper-warp force ships, communicate among airships is through semaphore flags, and extra of that kind of thing. It learn via lovely quick and that i may perhaps look at the sequel, if merely since it tells the tale of 1 of the 2 finest (to me) characters after the climactic conflict during this one.

Dean: This booklet is without doubt one of the so much striking sci fi myth books i have ever read! think somewhere in area there's a floating orb, jam-packed with gases, a few land, water and energy. Virga (this floating orb in space) has millions of civilizations, because it appears the scale of the moon or maybe earth in dimension. Its a gorgeous concept, and that i wasn't bored as soon as in "Sun of Suns", even though it does get a bit 'game of thrones' complicated with all of the characters. check it out if you'd like an excellent weekend read.

Mike: the realm of Virga (a bunch of floating towns inside of a huge balloon in space) makes for a few fascinating world-building (spinning cities, home made suns, round lakes) however the characters are flat and unengaging and the tale is just so-so. There are a few great visible moments, of the battles (naval engagements in space, other than there is air so humans can simply fly round in the event that they want), and the way humans stream and engage once they have surroundings yet no (inherent) gravity. yet my major challenge is with this global concept: yes, it really is fascinating on its face, yet there is no try and recommend WHY one of these balloon might exist or the way it might be able to paintings (i.e. the place does the strength come from?); absent that, it simply seems like an enormous gimmick. Like, first i will get a hold of a few loopy nutso international the place there are wood spaceships, after which i'm going to determine why it is there. There are tricks of Virga's position in a bigger universe because the tale winds up, and it feels like those topics are picked up back within the fifth booklet of the sequence (Ashes of Candesce), yet i am not convinced i will move that far.
